

G. RAGHAVENDRA REDDY

Java Backend Developer

+91 8247735252 | raghavendra.gondhi13@gmail.com | Wanaparthi, Telangana | linkedin.com/in/raghavendra-reddy66

PROFESSIONAL SUMMARY

- Java Full Stack Developer with 3.5+ years of experience across SAP Commerce Cloud (Hybris 2211) and Spring Boot microservices, delivering scalable B2B/B2C eCommerce platforms and enterprise applications.
- Proficient in SAP Commerce Cloud (CCv2) customisation — data modelling, Service Layer, WCMS, Solr search, Flexible Search, ImpEx, Backoffice, HAC, and Groovy scripting — combined with Java/Spring Boot REST API and microservices development.
- Delivered multi-country payment gateway integrations, a B2B field-sales journey tracking (Day Journey Planning) feature for Shree Cement Limited, and real-time auction and digital wallet platforms across both SAP Hybris and Spring Boot stacks.
- Experienced in system integrations using SAP CPI, REST/OCC Web Services, and webhooks, connecting CRM, DSP, logistics, and third-party services (SendGrid, AWS S3, Blockchain-based data storage).
- Implemented JWT-based authentication and Role-Based Access Control (RBAC) across platforms, strengthening application security and reducing unauthorised access incidents by 25%.
- Hands-on experience with SAP Commerce 2211, CronJob/ServiceLayerJob-based batch processing, production log monitoring, and database query optimisation (MySQL, Oracle SQL), improving application performance by 15%.
- Skilled in extending the Hybris data model — customising items.xml, defining new item types, item relations, and enums — to support new business workflows end-to-end.

TECHNICAL SKILLS

Languages: Java, JavaScript, HTML, CSS, Groovy

SAP Commerce / Hybris: SAP Commerce Cloud (Hybris 2211, CCv2), Service Layer, WCMS, Solr Search, Flexible Search, ImpEx, Backoffice, HAC, OCC/Web Services, CronJobs, ServiceLayerJob, items.xml Customisation, Enums & Item Relations

Backend Frameworks: Spring Boot, Spring MVC, Spring Data JPA, Spring Security, Spring Scheduler, Hibernate, JPA

Architecture: Microservices Architecture, RESTful API Design, Layered Architecture (Service/Facade/DAO), Event-Driven Design

Integration: SAP CPI, REST & Webhook Integrations, CRM & DSP Integration, SendGrid, Blockchain-based Data Storage, Geo-location Validation

Databases: MySQL, Oracle SQL

Cloud & Servers: SAP CCv2, AWS S3, Apache Tomcat, SAP Cloud Platform Logging & Monitoring

Security: JWT Authentication, Role-Based Access Control (RBAC)

Tools & Practices: Git, GitHub, SourceTree, JIRA, Postman, JUnit, Agile/Scrum

Runtime: JDK 21

PROFESSIONAL EXPERIENCE

SAP Hybris / Java Full Stack Developer — CJSS Technologies Pvt Ltd May 2025 – Present | Hyderabad, Telangana

Software Engineer — PYRO Holding Pvt. Ltd March 2023 – May 2025 | Hyderabad, Telangana

PROJECTS

Shree Cement Limited – B2B Commerce Platform

Client: Shree Cement Limited | Role: SAP Hybris Developer | CJSS Technologies | April 2026 – September 2026

- Worked on a B2B Commerce platform for Shree Cement Limited, contributing to core platform features including Day Journey Planning (DJP) — a field-sales officer tracking feature.
- Implemented the DJP feature enabling sales officers to plan and track daily journeys from start location to end location across dealer/retailer counters and influencer sites.
- Built revisit functionality to reschedule and track follow-up visits when dealers or retailers were unavailable at their registered site location, ensuring complete visit coverage and data accuracy.
- Captured and processed sales officer activity events — Start Day, Check-in, Form Start, Form Submit, Checkout, Revisit, and End Day — enabling accurate, real-time journey and productivity tracking.
- Designed an automated hourly geo-ping mechanism to capture and log sales officer location whenever no activity event was triggered, maintaining continuous field visibility for the sales team.
- Implemented geo-location validation logic to verify sales officers' presence at the correct counter/site during on-ground inspections, improving field-audit accuracy.

- Captured and validated field-collected data on product usage, top-demand products, and sales volume (in metric tons) per counter/site to support sales and demand analytics.
- Customised items.xml to introduce new item types and define item relations for the DJP feature, and created enums for journey/visit status management.
- Integrated SAP Commerce with SAP CPI for inbound data synchronisation from CRM systems and outbound delivery of processed data to downstream DSP systems.
- Monitored production logs and system events using SAP Cloud Platform logging, and used Groovy scripts to inspect order-processing actions and quickly identify and resolve failures.

Technologies: Java, SAP Commerce Cloud (Hybris 2211), Spring Framework, Groovy, SAP CPI, MySQL, GitHub.

Sales Financing Project – SAP Commerce Cloud (CCv2)

Client: Samsung | Role: SAP Hybris Developer | CJSS Technologies | September 2025 – February 2026

- Implemented cluster-based, multi-country payment gateway integrations in SAP Commerce Cloud for Samsung's localised B2B/B2C platforms, enabling compliant, high-reliability transactions across multi-language stores.
- Integrated multiple payment methods — cards, wallets, and country-specific providers — using the Hybris payment service architecture, with callbacks and webhooks for real-time transaction status updates.
- Built robust error handling, logging, and retry mechanisms to improve transaction success rates, and implemented custom REST/OCC endpoints for order cancellation and transaction status workflows.
- Monitored, triggered, and debugged SAP Commerce CronJobs in CCv2 environments; implemented custom ServiceLayerJob-based CronJobs for batch processing and testing.
- Performed end-to-end testing across success, failure, timeout, refund, and partial-capture scenarios, and supported production issues with root-cause analysis and hot fixes.

Technologies: Java, SAP Commerce Cloud (Hybris 2211), Spring Framework, OCC/Web Services, JUnit, GitHub.

WOWS – Real-Time Online Auction Platform (Wines, Spirits & Champagnes)

Client: iShop-Changi | Role: Java Backend Developer | CJSS Technologies | May 2025 – September 2025

- Designed and developed RESTful Spring Boot APIs for auction listing, bid placement, bid raise, real-time status tracking, and result notifications for a live-bidding eCommerce platform.
- Implemented core business logic including minimum bid validation, bid-increment rules, countdown timers, and winner-determination workflows.
- Integrated SendGrid email service with dynamic templates for bid confirmations, outbid alerts, and win/loss updates, and configured AWS S3 for JSON data and image uploads.
- Secured all auction APIs using JWT authentication and Role-Based Access Control (RBAC) to protect bidder data.

Technologies: Java, Spring Boot, Spring Data JPA, MySQL, JWT, AWS S3, SendGrid, REST APIs, JUnit, Git, Postman.

C-Topup – BSNL Mobile Recharge & Digital Wallet Platform

Client: BSNL (Bharat Sanchar Nigam Limited) | Role: Java Backend Developer | PYRO Holding | December 2023 – May 2025

- Built RESTful microservices using Spring Boot to modularise a high-availability recharge and wallet top-up platform serving millions of subscribers, improving maintainability and scalability.
- Implemented JWT-based authentication and a Role-Based Access Control (RBAC) system across all microservices, and optimised database report-fetching queries to improve API response times.
- Integrated the backend system with a blockchain-based distributed ledger for secure data storage, using blockchain in place of a traditional relational database to record and validate wallet transactions, ensuring tamper-proof, immutable transaction history.
- Collaborated with the React.js front-end team to integrate UI components with backend microservices, ensuring stable and well-defined API contracts.

Technologies: Java, Spring Boot, Spring Data JPA, Hibernate, Blockchain (Distributed Ledger), JWT, RBAC, REST APIs, JUnit, React.js, Git, Jira.

EDUCATION

Bachelor of Technology — Civil Engineering

Brilliant Institute of Engineering & Technology (BRIL), Hyderabad, Telangana
